ABSTRACT

This paper is mainly streamered towards child safety solutions by developing a gadget which can be tracked via its GPS locations and also a panic button on gadget is provided to alert the parent via GSM module calling for help. Parental android app is developed to manage and track the device anytime. Smart gadget device is always connected to parental phone which can receive and make phone calls and also receive SMS on gadget via GSM module, also a wireless technology is implemented on device which is useful to bound the device within a region of monitoring range, if device is moving out of monitoring range then an alert will be triggered on binding gadget, this helps you keep a virtual eye on child. Health monitoring system on gadget checking for parameters like heart beat/pulse rate and temperature is included which can be monitored on parental app. Gadget also monitors whether it is plugged on hand or not using contact switch and alert the parent as soon as it is unplugged.

CHAPTER 1

INTRODUCTION

1.1 Project Overview

A tracker that helps parents track a child's location so that the child does not get into dangerous situations.

The inspiration for this wearable comes mainly from the ever-increasing need of safety for small children in present times because there may be a chance of child lost in the major crowded areas.

This main script mainly focuses on the key features of missing child can be helped by the individuals present around the child and plays an important role in the child's safety until reunite the parent to that location.

1.2 Purpose

Nowadays Parents have more responsibility than older about their children's. Because Crime rates are increasing day by day in our country, Crimes such as Child Abuse, Rape, Murders, Illegal Relationship to avoid these kinds of crimes parents must watch their children every step. Eventually mobile phones cause major allegations on our society. Many teens must be noticed by their own parents; it is our duty. But sometimes children are arguing with their parents for watching their steps, to overcome these issues, we need to watch them through online.

LITERATURE SURVEY

2.1 Existing Problem

Authors: M Nandini Priyanka, S Murugan, K. N. H. Srinivas, T. D. S. Sarveswararao, E. Kusuma Kumari. Title: Smart IoT Device for Child Safety and Tracking. Published in: 2019 IEEE. The system is developed using Link-It ONE board programmed in embedded C and interfaced with temperature, heartbeat, touch sensors and also GPS, GSM & digital camera modules. The novelty of the work is that the system automatically alerts the parent/caretaker by sending SMS, when immediate attention is required for the child during emergency.

Merits: The parameters such as touch, temperature & heartbeat of the child are used for parametric analysis and results are plotted for the same.

Demerits: To implement the IoT device this ensures the complete solution for child safety problems.

Authors: Akash Moodbidri, Hamid Shahnasser Title: Child safety wearable device. Published in: 2017 IEEE. The purpose of this device is to help the parents to locate their children with ease. At the moment there are many wearables' in the market which helps to track the daily activity of children and also helps to find the child using Wi-Fi and Bluetoothservices present on the device.

Merits: This wearable over other wearable is that it can be used in any phone and it is not necessary that an expensive smartphone is required and doesn't want to be very tech savvyindividual to operate.

Demerits: As, this device's battery gives short life-time.

Authors: Aditi Gupta, Vibhor Harit. Published in: 2016 IEEE. Title: Child Safety & Tracking Management System by using GPS. This paper proposed a model for child safety through smart phones that provides the option to track the location of their children as well as in case of emergency children is able to send a quick message and its current location via Short Message services.

Authors: Dheeraj Sunehera, Pottabhatini Laxmi Priya. Title: Children Location Monitoring on Google Maps Using GPS and GSM. Published in: 2016 IEEE. This paper provides an Android based solution for the parents to track their children in real time. Different devices relate to a single device through channels of internet. The concerned device is connected to server via internet. The device can be used by parents to track their children in real time or for women safety. The proposed solution takes the location services provided by GSM module. It allows the parents to get their child's current-location via SMS. Merits: A child tracking system using android terminal and hoc networks.

Demerits: This device cannot be used in rural areas.

2.2 REFERENCES

Paper 1: Smart IOT Device for Child Safety and Tracking

Child safety and tracking is a major concern as the number of crimes on children are reported nowadays. With this motivation, a smart IoT device for child safety and tracking is developed to help the parents to locate and monitor their children. The system is developed using LinkIt ONE board programmed in embedded C and interfaced with temperature, heartbeat, touch sensors and also GPS, GSM & digital camera modules. The novelty of the work is that the system automatically alerts the parent/caretaker by sending SMS, when immediate attention is required for the child during an emergency. The parameters such as touch, temperature & heartbeat of the child are used for parametric analysis and results are plotted for the same. The above system ensures the safety and tracking of children.

Paper 2: Child Safety Monitoring System Based on IoT

The overall percentage of child abuse cases filed nowadays in the world is about 80%, out of which 74% are girl children and the rest are boys. For every 40 seconds, a child goes missing in this world. Children are the backbone of one's nation, if the future of children was affected, it would impact the entire growth of that nation. Due to the abuse cases, the emotional and mental stability of the children gets affected which in turn ruins their career and future. These innocent children are not responsible for what happens to them. So, parents are responsible for taking care of their own children. But, due to economic conditions and the aim to focus on their child's future and career, parents are forced to crave for money. Hence, it becomes difficult to cling on to their children all the time. In our system, we provide an environment where this problem can be resolved in an efficient manner. It allows parents to easily monitor their children in real time just like staying beside them as

well as focusing on their own career without any manual intervention.

Paper 3: IoT-based Child Security Monitoring System

Nowadays, the crime rate associated with children keeps increasing due to which draws peoples' attention regarding child safety. This research is conducted to propose a child security smart band utilizing IoT technology. Online questionnaires and semi-structured interviews are methodologies used to collect data. The online questionnaire gains feedback by sending questions electronically, where answers need to be submitted online. In the semi structured interview, researchers meet and ask respondents some predetermined questions while others being asked are not planned in advance. Through information obtained, a smart band has been proposed to monitor the safety of children. By this, parents know what is happening remotely and can take actions if something goes wrong. The future improvements of this device will be adding functions and software to make it works like a phone such as messaging, gallery, Google, YouTube, meanwhile, adding more child security features so that child safety is guaranteed.

Paper 4: IOT Based Smart Gadget for Child Safety and Tracking

This paper is mainly streamed towards child safety solutions by developing a gadget which can be tracked via its GPS locations and also a panic button on gadget is provided to alert the parent via GSM module calling for help. Parental android app is developed to manage and track the device anytime. Smart gadget device is always connected to parental phone which can receive and make phone calls and also receive SMS on gadget via GSM module, also a wireless technology is implemented on device which is useful to bound the device within a region of monitoring range, if device is moving out of monitoring range then an alert will be triggered on binding gadget, this helps you keep a virtual eye on child. Health monitoring system on gadget checking for parameters like heart beat/pulse rate and temperature is included which can be monitored on parental app. Gadget also monitors whether it is plugged on by hand or not using contact switch and alert the parent as soon as it is unplugged.

PROBLEM STATEMENT DEFINITION

Create a problem statement to understand your customer's point of view.

The Customer Problem Statement template helps you focus on what matters

to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

CHAPTER 3

IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

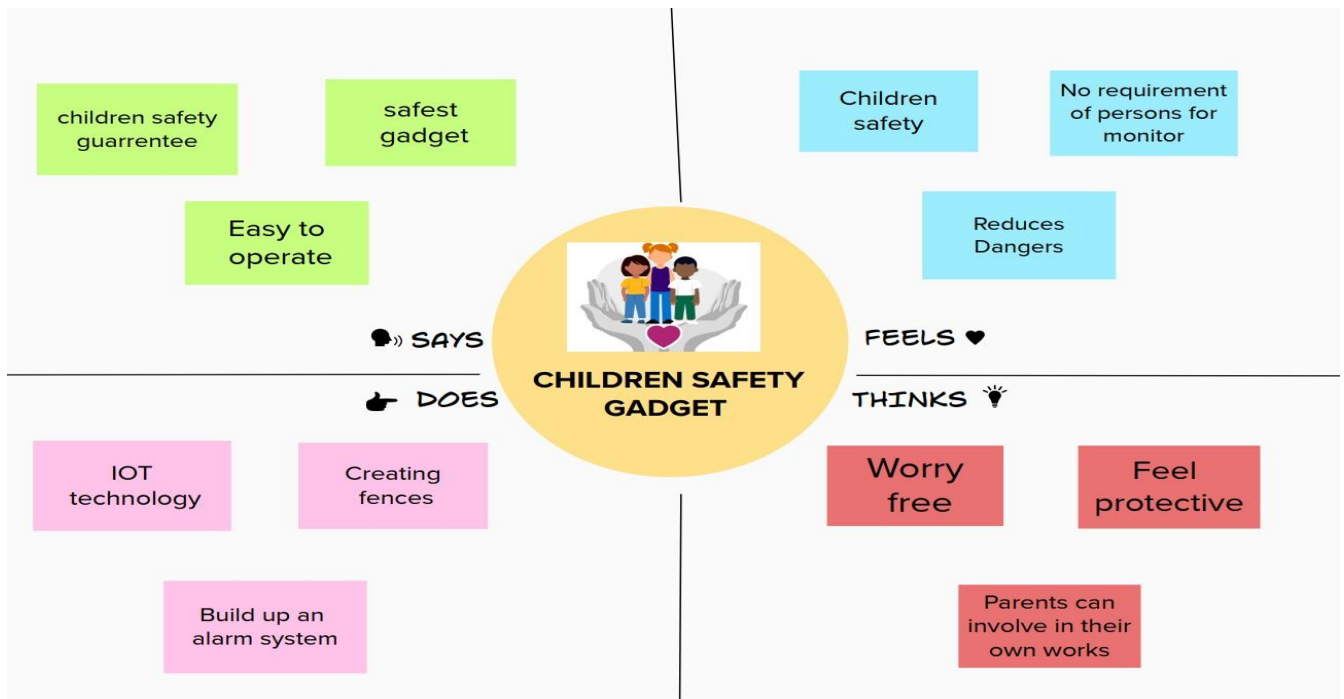

Fig 3.1.1 Empathy Map

This project was created to help parents keep track of their children's whereabouts. Children are more readily influenced by their peers these days, and they may be duped or abducted by strangers. This method may be developed to track a child's current position. After a specific period, the Web application on the device will update the location of the kid to the application. By pushing the distinct button that has been introduced, parents may even take action if their kid is unstable or in an inappropriate area. WFPS, a WIFI positioning system that doesn't connect to the internet but connects to Wi-Fi access points, will be used to track the child's whereabouts

3.3 PROPOSED SOLUTION

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	<ul style="list-style-type: none">• Parents tend to be paranoid about leaving children alone at home, fearing for their safety.• Leaving children at home without adult supervision puts them at greater risk of accident or injury.
2	Idea / Solution Description	<ul style="list-style-type: none">• Keep your children guarded 24 hours a day. The first parental control app with real time functions• Know. Prevent. Protect. 24/7 remotely of anywhere.
3	Noveity / Uniqueness	<ul style="list-style-type: none">• Live camera• Video Recording• GPS Tracking• Record Surrounding• Caution Notification
4	Social Impact / Customer Satisfaction	<ul style="list-style-type: none">• Now you can access all features directly on your phone and control the device easily and directly.

		<ul style="list-style-type: none"> • See all activity of yours Children, easy and quickly in the app from your Android phone without Worries • All features in one Android application. Make you monitoring more comfortable and easy. This new feature will allow you stay informed 24 hours a day in real time.
5	Business Model (Revenue model)	<ul style="list-style-type: none"> • This is a powerful monitoring solution that provides you an excellent level of service. • The application has been designed with the view of Advanced IOT Technology, Node Red and other Powerful Technologies.
6	Scalability of the Solutions	<ul style="list-style-type: none"> • Take pictures, record surrounding and view all activity of your Children , directly with our Android App. • You will Receive in your phone notifications in real time, every time when the device detects new information. Also you can configure alerts of your interest.

CHAPTER 7

CODING & SOLUTIONING

7.1 FEATURE 1 (ADDING GEOFENCE)

- Geofence is like a round wall covering the given location. So parents can use them to mark the location where their children are going.

```
package com.example.geofence;
import android.app.PendingIntent;
import android.content.Context;
import android.content.ContextWrapper;
import android.content.Intent;import android.widget.Toast;
import com.google.android.gms.common.api.ApiException;
import com.google.android.gms.location.Geofence;
import com.google.android.gms.location.GeofenceStatusCodes;
import com.google.android.gms.location.GeofencingRequest;
import com.google.android.gms.maps.model.LatLng;
public class GeofenceHelper extends ContextWrapper {

    private static final String TAG =
        "GeofenceHelper";PendingIntent pendingIntent;

    public GeofenceHelper(Context base) {
        super(base);
    }

    public GeofencingRequest getGeofencingRequest(Geofence
geofence) {return new GeofencingRequest.Builder()
        .addGeofence(geofence)

        .setInitialTrigger(GeofencingRequest.INITIAL_TRIGGER_ENTER)
        .build();
    }
```

```

        public Geofence getGeofence(String ID, LatLng latLng, float
radius,int transitionTypes) {
            return new Geofence.Builder()
                .setCircularRegion(latLng.latitude,
latLng.longitude,
radius)

                .setRequestId(ID)
                .setTransitionTypes(transitionTypes)
                .setLoiteringDelay(5000)
                .setExpirationDuration(Geofence.NEVER_EXPIRE)
                .build();
        }

        public PendingIntent getPendingIntent() {
            if (pendingIntent != null) {
                return pendingIntent;
            }
            Intent intent = new Intent(this,
GeofenceBroadcastReceiver.class);
            pendingIntent = PendingIntent.getBroadcast(this, 2607, intent,
PendingIntent.FLAG_IMMUTABLE);
            return pendingIntent;
        }

        public String getErrorString(Exception e) {
            if (e instanceof ApiException) {
                ApiException apiException = (ApiException) e;
                switch (apiException.getStatusCode()) {
                    case GeofenceStatusCodes
                        .GEOFENCE_NOT_AVAILABLE:
                        return "GEOFENCE_NOT_AVAILABLE";
                    case GeofenceStatusCodes

```

```

GEOFENCE_NOT_AVAILABLE:
    return "GEOFENCE_NOT_AVAILABLE";
case GeofenceStatusCodes
    .GEOFENCE_TOO_MANY_GEOFENCES:
    return "GEOFENCE_TOO_MANY_GEOFENCES";
case GeofenceStatusCodes
    .GEOFENCE_TOO_MANY_PENDING_INTENTS:
    return "GEOFENCE_TOO_MANY_PENDING_INTENTS";}}

```

7.2 FEATURE 2 (ALERT NOTIFICATION)

- Once geofence is added, when the child enters the geofence a notification will be sent
- When the child leaves the geofence a notification will be sent.

```

package com.example.geofence;

import android.content.BroadcastReceiver;import
android.content.Context;

import android.content.Intent; import android.location.Location;import
android.os.CountDownTimer;import android.util.Log;

                mToastToShow.show();
            }

            public void onFinish() {
                mToastToShow.cancel();
            }
        };
// Show the toast and starts the countdown
        mToastToShow.show();
        toastCountDown.start();*/

```

```

    NotificationHelper notificationHelper = new NotificationHelper(context);
    notificationHelper.sendHighPriorityNotification("GEOFENCE_TRANSITION_ENTER",
    "", MapsActivity.class);

```

```

GeofencingEvent geofencingEvent = GeofencingEvent.fromIntent(intent);
If (geofencingEvent.hasError())

```

```

    Log.d(TAG, "onReceive: Error receiving geofence event...");
    return;
}

```

```

    List<Geofence> geofenceList =
    geofencingEvent.getTriggeringGeofences();
    for (Geofence geofence: geofenceList) {
        Log.d(TAG, "onReceive: " + geofence.getRequestId());
    }
//    Location location = geofencingEvent.getTriggeringLocation();
    int transitionType = geofencingEvent.getGeofenceTransition();

```

```

    switch (transitionType) {
        case Geofence.GEOFENCE_TRANSITION_ENTER:

            notificationHelper.sendHighPriorityNotification("Entered the
Location", "", MapsActivity.class);
            break;

```

```

        case Geofence.GEOFENCE_TRANSITION_EXIT:
            notificationHelper.sendHighPriorityNotification("Exited the Location ", "",
MapsActivity.class);
            break;} } }

```

7.3 DATABASE SCHEMA

We assume that only one child can leave the set maximum distance at a time. The beacons take 20 seconds to update the previous location data, hence we assume the notification trigger has a 20-40 seconds' lag in updating the right location. We assume that Wi-Fi is readily available since the backend server is located in the cloud and then to use the mobile devices' location services.

CHAPTER 9

RESULTS

9.1 PERFORMANCE METRICS

1. USER REGISTRATION:

User gets registered to the app using their mail and create their password. On the user is registered a verification mail will be sent to the user mail id. The user needs to verify the account. All user details are stored in the firebase and verification mail is sent by firebase authentication.

Registration Page:

The screenshot shows the registration page for 'Geofence'. It features a purple header with the app name. Below is a cartoon illustration of a boy. A green 'Register' button is positioned above two input fields for 'Email' and 'Password'. A purple 'REGISTER' button is below the input fields. At the bottom, there is a link 'Login here' for already registered users.

Verification mail

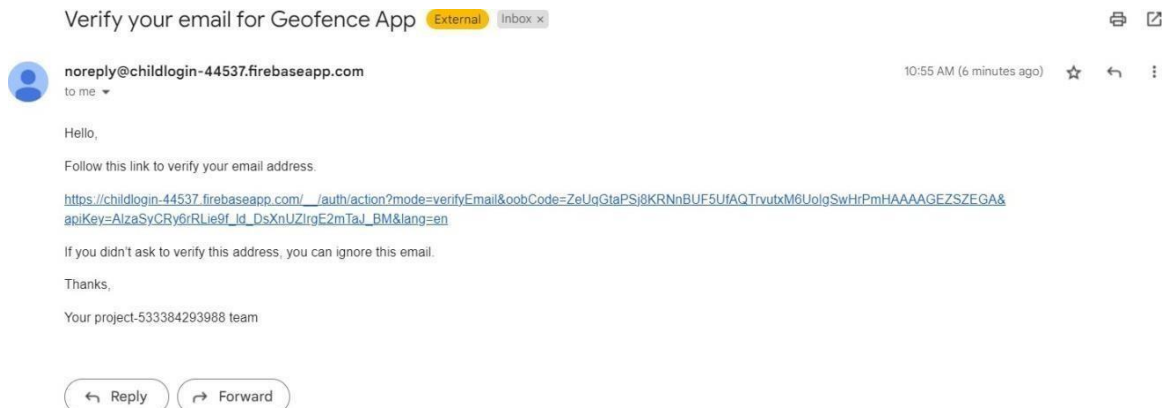

Fig 9.1.2 Verification Mail

2. USER LOGIN

User with their registered mail and password will login to the account. As the details are stored in firebase, when invalid mail or password is entered a message say invalid mail or password occur

Login page:

The login form features a purple header with the text "Geofence". Below this is a cartoon illustration of a boy with brown hair, wearing a yellow shirt and blue pants, with his arms outstretched. Underneath the illustration is the word "Login" in a green, stylized font. The form contains two input fields: "Email" and "Password", both with light gray borders. Below these fields is a purple button with the text "LOGIN" in white. At the bottom, there is a link that says "Not registered yet [Register here](#)".

Fig 9.2.1 User login

User Details

The screenshot shows the Firebase Authentication console. On the left is a dark sidebar with navigation options: Project Overview, Authentication, Build, Release & Monitor, Analytics, Engage, and All products. The main area is titled "Authentication" and has tabs for Users, Sign-in method, Templates, Usage, and Settings. The "Users" tab is active, displaying a table of users. At the top of the table is a search bar labeled "Search by email address, phone number, or user UID" and an "Add user" button. The table has columns for Identifier, Providers, Created, Signed In, and User UID. Two users are listed: "gghalaj123@gmail.com" and "swetha.dursiraj2002@gmail.com", both created on Nov 11, 2022. At the bottom right of the table, there is a "Rows per page" dropdown set to 50 and a pagination indicator "1 - 2 of 2".

Identifier	Providers	Created	Signed In	User UID
gghalaj123@gmail.com	📧	Nov 11, 2022		OTPKhwzPncagSBu0Xp6wDo3zS...
swetha.dursiraj2002@gmail.com	📧	Nov 11, 2022		05Q3ecLYAh0dcS2Aa885PNm8J63

3. ADDING GEOFENCE AND ALERT NOTIFICATION

User can add geofence in the location where they want to add or where their child is going play so they can monitor the child location. Once the child enters the geofence alert notification says entered the location will be displayed. When the child leaves the geofence alert notification says exited the location will have displayed.

CHAPTER 10

ADVANTAGES & DISADVANTAGES

ADVANTAGES:

- ✓ Simple and easy to use
- ✓ Parents can feel secure because if the child leave the desired location and immediately anotification will be sent.
- ✓ Geofence can be added easily.
- ✓ Accurate real-time data.
- ✓ Efficient use of resources.
- ✓ Accountability and Safety.
- ✓ Process automation

DISADVANTAGES:

- ✓ Multiple geofence can be a problem.
- ✓ Maintenance can be time-consuming.
- ✓ Pushback due to privacy concerns.
- ✓ Battery and data draining.
- ✓ Lack of formal policies.

CHAPTER 11

CONCLUSION

This research demonstrates Smart IoT device for child safety and tracking, to help the parents to locate and monitor their children. Through this device, the parent can track and monitor their child with just a simple app. It is not possible to always stay beside children as most of the parents need to go for work. With this project, parents can track the location of their children and get alerts whenever the child out of the geofence. It becomes easy for parents to look after their child while working. This device is efficient to use. Thus, by keeping in mind the advantages and applications we are developing a child monitoring device. In order to avoid kidnapping cases, the child monitoring system is needed.

CHAPTER 12

FUTURE SCOPE

The future work would be to further develop and implement the safety wearable device so that it could be watch or sown into a fabric that could be worn, using synthetic fibers. When a violation of child safety is identified, a certain sensor in the child module will emit a signal, which is the main function of the suggested child tracking system. These sensors and WFPS will send this signal to the microcontroller, which will then send it to the transmitter, which will then send it to the parent module. The decision will be made by the parent module, and the violation handling procedure will begin. The kid tracking system's functionality necessitates hardware between the child and parent models, which comprises a drive circuit for the sensors' activation.
